

BUSINESS SALES PERFORMANCE ANALYTICS REPORT

1. Title Page

Project Title: Business Sales Performance Analytics Dashboard

Tool Used: Power BI

Dataset: Superstore Sales Dataset (Kaggle)

Prepared By: Varun Suthar

Date: 14/05/2026

2. Introduction

This project focuses on analyzing business sales data to understand performance across products, regions, and categories.

The goal is to convert raw sales data into meaningful insights that help in decision-making and business growth.

Data analytics techniques are used to identify trends, patterns, and key performance indicators (KPIs).

3. Objective

- To analyze overall sales and profit performance
 - To identify top-selling products and categories
 - To study regional sales distribution
 - To analyze monthly sales trends
 - To generate business insights and recommendations
-

4. Dataset Description

The dataset used is the Superstore Sales Dataset from Kaggle. It contains real-world retail transaction data including:

- Order Date
- Sales
- Profit
- Quantity
- Product Category & Sub-Category
- Region
- Customer Details

5. Tools Used

- Power BI (Dashboard creation and visualization)
 - Microsoft Excel (Data cleaning and preparation)
 - Power Query (Data transformation)
-

6. Data Cleaning Process

The following cleaning steps were performed:

- Removed missing and duplicate values
 - Corrected data types (Date, Sales, Profit)
 - Structured data for analysis
 - Ensured data consistency
-

7. Key Performance Indicators (KPIs)

The following KPIs were analyzed:

- Total Sales
 - Total Profit
 - Total Orders
 - Profit Margin
 - Top Category
 - Top Region
-

8. Analysis & Findings

8.1 Sales Trend Analysis

Sales show variation over time with noticeable peak months indicating seasonal demand patterns.

8.2 Category Analysis

Technology category contributes the highest revenue, while Office Supplies show steady performance.

8.3 Regional Analysis

The West region performs best in terms of sales and profit

8.4 Product Analysis

A small number of products contribute to the majority of revenue, showing a concentration effect.

8.5 Profit Analysis

Some high-sales products have low profit margins, indicating pricing inefficiencies.

9. Key Insights

- Sales performance is not evenly distributed across categories
 - Profit is concentrated in a few regions and products
 - Seasonal trends affect sales significantly
 - Certain products need pricing optimization
-

10. Business Recommendations

- Focus on high-profit categories like Technology
 - Improve pricing strategy for low-margin products
 - Increase stock during peak sales seasons
 - Expand business in high-performing regions
 - Improve customer retention strategies
-

11. Conclusion

This project demonstrates how data analytics can be used to analyze business performance effectively. The Power BI dashboard provides clear insights into sales trends, product performance, and regional analysis, helping businesses make data-driven decisions.

12. Future Scope

- Predictive sales forecasting
- Customer segmentation analysis
- Real-time dashboard integration
- Advanced analytics using machine learning
